

Consent Audit Checklist

Prepared by Cipher Guardians

A practical checklist for reviewing consent governance across websites, CRM systems, analytics tools, and marketing workflows.

Consent Collection

Organizations should verify whether consent language is understandable, purpose-specific, and operationally recorded.

Consent Withdrawal

Withdrawal requests should propagate operationally across downstream systems including CRM, marketing, analytics, and reporting platforms.

Consent Evidence

Businesses should maintain timestamped evidence of collection, modification, withdrawal, and processing purpose alignment.

Consent-Aware Analytics

Analytical systems should reflect current consent states and avoid continued reporting usage after consent withdrawal.

Review Area	Focus
-------------	-------

Governance	Ownership, workflows, accountability
Consent	Collection, propagation, withdrawal
Engineering	Masking, retention, minimization
Analytics	Dashboard exposure, warehouse governance
Monitoring	Audit logs, exports, downstream visibility

Operational Implementation Considerations

Organizations should operationalize privacy governance beyond documentation. This includes embedding controls into onboarding workflows, ETL pipelines, warehouses, dashboards, analytical systems, reporting environments, and downstream integrations.

Need help operationalizing privacy governance?

Cipher Guardians helps organizations improve DPDP readiness, privacy engineering maturity, analytics governance, consent management, and operational privacy workflows.
